

**ABSTRACT**

Removable edible label based on collagen for labelling food products, the label being  
5 free of any adhesive layer, being able to stick to the food product throughout the  
slaughter process until packaging and being able to be removed intact from the food  
product whenever desired, said label has a swelling rate in water between 120% and  
450% and a pH value between 5,5 and 10,0. The present invention relates to  
removable edible labels based on collagen for labelling food products, to edible films  
10 based on collagen, to a process for preparing an edible film based on collagen from a  
collagen gel and to a process for preparing removable edible labels based on collagen  
from edible films.
